

dotspeak

Quick manual — build sentences with number codes

dotspeak lets you build a sentence using only the number keys. Each digit stands for a category name; typing digits builds a code that opens a word list. Pick a word and it is added to the sentence at the top of the window.

Starting

Run `python app.py` in the project folder (Python 3 with tkinter). On start, `loctool.txt` is copied over `toolloc.txt`.

Digits

Digit	1	2	3	4	5	6	7	8	9	0
Name	go	plus	minus	loc	person	stat	pref	time	tool	nature

Digits combine: the file name is the names joined together. **8** → `time.txt`, **8 8** → `timetime.txt`, **1 9 9** → `gotooltool.txt`. If the file does not exist, the status line says “not found”.

Keys

Key	Action
0 - 9	Extend the code and show its word list
Down / +	Move down in the list
Up / -	Move up in the list
Enter	Add the selected word to the sentence (or click a word)
Esc	Cancel the current code
Backspace	Remove the last digit, or the last word if no code
Delete	Clear the whole sentence

Example

Type **8** → the time list appears with *time* selected. Press **+** three times → *hour*. Press **Enter** → the sentence reads “hour” and the code is cleared, ready for the next word.

Current word lists

Code	File	Words
1	go.txt	path, road, location, way, ...
2	plus.txt	yes, ok, good, beautiful, ...
3	minus.txt	minus, no, problem, negative, ...
4	loc.txt	home, house, here, location, ...
5	person.txt	person, man, woman, I, ...
6	stat.txt	open, close, happy, sad, ...
7	pref.txt	expensive, cost, love, hate
8	time.txt	time, second, minute, hour, ...
9	tool.txt	tool, key, machine, robot, ...
0	nature.txt	plant, tree, food, mountain, ...
1 1	gogo.txt	go, do, move, build, ...
1 2	goplus.txt	fast, quick, speed, early
1 9	gotool.txt	prompt, assert, eval, DB, ...
2 2	plusplus.txt	increase, grow, develop, build
2 3	plusminus.txt	about, somewhat, closeto, change

Code	File	Words
3 1	minusgo.txt	stay, sleep, rest, sit, ...
3 3	minusminus.txt	tolose, toproblem, tocry, toforget
3 7	minuspref.txt	hate, dislike, leave, cheap
3 8	minustime.txt	wait, stall, rest
4 9	loctool.txt	chair, table, lamp, bed, ...
6 6	statstat.txt	happy, sad, anxious, depressed, ...
7 7	prefpref.txt	pref, tolove, tolike, tohate, ...
7 8	preftime.txt	holiday, vacation, free, slack, ...
8 8	timetime.txt	develop, iterate, plan, control, ...
8 9	timetool.txt	clock, stopwatch, watch, alarm
9 4	toolloc.txt	chair, table, lamp, bed, ...
9 9	tooltool.txt	work, drive, control, clean, ...
0 0	naturenature.txt	evolve, eat
1 9 9	gotooltool.txt	variable, value, =, hillclimb, ...

Editing word lists

Word files are plain text, one word per line, next to `app.py`. They are re-read on every keypress, so changes show up without restarting. Run `python count.py` to see how many entries each file has.
