

# dotspeak

Quick manual — build sentences with number codes

dotspeak lets you build a sentence using only the number keys. Each digit stands for a category name; typing digits builds a code that opens a word list. Pick a word and it is added to the sentence at the top of the window.

## Starting

Run `python app.py` in the project folder (Python 3 with tkinter). On start, `hometool.txt` is copied over `toolhome.txt`.

## Digits

| Digit | 1  | 2    | 3     | 4    | 5    | 6    | 7    | 8    |
|-------|----|------|-------|------|------|------|------|------|
| Name  | go | plus | minus | home | stat | pref | time | tool |

Digits combine: the file name is the names joined together. **7** → `time.txt`, **7 7** → `timetime.txt`, **1 8 8** → `gotooltool.txt`. If the file does not exist, the status line says “not found”.

## Keys

| Key       | Action                                                  |
|-----------|---------------------------------------------------------|
| 1 - 8     | Extend the code and show its word list                  |
| Down / +  | Move down in the list                                   |
| Up / -    | Move up in the list                                     |
| Enter     | Add the selected word to the sentence (or click a word) |
| Esc       | Cancel the current code                                 |
| Backspace | Remove the last digit, or the last word if no code      |
| Delete    | Clear the whole sentence                                |

## Example

Type **7** → the time list appears with *second* selected. Press **+** twice → *hour*. Press **Enter** → the sentence reads “hour” and the code is cleared, ready for the next word.

## Current word lists

| Code | File          | Words                             | Code  | File           | Words                                |
|------|---------------|-----------------------------------|-------|----------------|--------------------------------------|
| 1    | go.txt        | path, road, location, way, ...    | 3 3   | minusminus.txt | tolose, toproblem, tocry, toforget   |
| 2    | plus.txt      | yes, ok, good, beautiful, ...     | 3 6   | minuspref.txt  | hate, dislike, leave, cheap          |
| 3    | minus.txt     | minus, no, problem, negative, ... | 3 7   | minustime.txt  | wait, stall, rest                    |
| 4    | home.txt      | home, house, here, location, ...  | 4 4   | homehome.txt   | person, man, woman, I, ...           |
| 5    | stat.txt      | open, close, happy, sad, ...      | 4 8   | hometool.txt   | chair, table, lamp, bed, ...         |
| 6    | pref.txt      | expensive, cost, love, hate       | 5 5   | statstat.txt   | happy, sad, anxious, depressed, ...  |
| 7    | time.txt      | second, minute, hour, day, ...    | 6 6   | prefpref.txt   | pref, tolove, tolike, tohate, ...    |
| 8    | tool.txt      | tool, key, machine, robot, ...    | 6 7   | preftime.txt   | holiday, vacation, free, slack, ...  |
| 1 1  | gogo.txt      | go, do, move, build, ...          | 7 7   | timetime.txt   | develop, iterate, plan, control, ... |
| 1 2  | goplus.txt    | fast, quick, speed, early         | 7 8   | timetool.txt   | clock, stopwatch, watch, alarm       |
| 1 8  | gotool.txt    | prompt, assert, eval, DB, ...     | 8 4   | toolhome.txt   | chair, table, lamp, bed, ...         |
| 2 2  | plusplus.txt  | increase, grow, develop, build    | 8 8   | tooltool.txt   | work, drive, control, clean, ...     |
| 2 3  | plusminus.txt | about, somewhat, closeto, change  | 1 8 8 | gotooltool.txt | variable, value, =, hillclimb, ...   |
| 3 1  | minusgo.txt   | stay, sleep, rest, sit, ...       |       |                |                                      |

## Editing word lists

Word files are plain text, one word per line, next to `app.py`. They are re-read on every keypress, so changes show up without restarting. Run `python count.py` to see how many entries each file has.
